

STELA Compliance Tool (Plus)

TitanTV provides broadcasters with a valuable tool that has already helped manage over 18 million satellite television company waiver requests. The STELA Compliance Tool allows broadcasters to respond to waiver requests in a timely manner. By minimizing the viewers lost to an out-of-market network service, the STELA Tool helps protect your location-based copyright and income stream.

The STELA Compliance Tool allows broadcasters to respond to waiver and challenge requests for Out-of-Market Service efficiently and consistently. While the basic STELA Compliance Tool allows broadcasters to respond and challenge requests one at a time, the Plus version provides powerful features that make waiver and challenge processing easy and reliable.

STELA Compliance Tool Plus Features include:

- Use Sort and Review to view all waivers and sort by criteria, e.g. dBu, Zip Code, name, date requested or vendor
- Use SmartBuffer to run all your automated filters with one easy command
- View important data about your waivers and challenges such as predicted dBu strength and number of days in queue
- Download all past granted and denied waivers with Waiver History
- Challenges are returned electronically to the DBS provider
- Access "Locate Viewer" to enter addresses and view signal area map locations, along with dBu values

For more information about the STELA Compliance Tool, the most trusted name in waiver processing, call 800.365.7629 or email CR_Sales@titantv.com

TitanTV's STELA Compliance Tool Plus turns a time consuming chore into a few minute per week maintenance program allowing your station employees to focus on their main job responsibilities.
